# Hands-on Task: Publishing a playlist

In this task you will create a new player, edit player settings to support playlists and then publish a playlist.

Editing player settings to support playlists

> Note: If you select the **Responsive** sizing option, the Standard (iframe) code works well and both the player and playlist are responsive. If you use the Advanced (in-page embed) code, the player will be responsive, but the playlist will not.

Publishing a playlist

1. In Video Cloud Studio, click **Players** to open the Players module.
2. Click **New Player**. Name the player `Playlist Player` and then click **Save**.
3. Locate the **Playlist Player** and click on the player name to open the player properties.
4. Select a **Player Type** of **Playlist**.
5. Set the **Aspect Ratio** to **16:9**.
6. Set the **Player Dimensions** to a **Width** of `640`.
7. Click **Save**.
8. Click **Styling** in the left navigation menu.
9. Click the **Playlist Type** of **Playlist (Vertical)**.
10. Click **Playback** in the left navigation menu.
11. Check **Play video when selected**.
12. Check **Continuous play mode**.
13. Click **Publish & Embed > Publish Changes** to publish the changes to the player.
14. Click **Media** to open the Media module.
15. Click **All Playlists** in the side navigation panel to display all the playlists.
16. Click the checkbox next to the **Birds** playlist.
17. Click **Publish and Embed > Web Player**.
18. Select the **Playlist Player**.
19. Click on the **URL** link. The player will open in a new browser tab. Confirm that the playlist player appears and that the videos in the playlist can be played.

20. (Optional) Email the player URL to your mobile device. Click on the link and confirm that playlist player appears and that the videos in the playlist can be played.
